

SGS 200-L / SGS 300-L / SGS 400-L

Strandpelletizers

The SCHEER Series Pelletizer was developed and engineered for the production of thermoplastic pellets. Its compact design, anti-flyback cutting chamber and precision machine components are just a few of the reasons that make the SCHEER Pelletizer a unique combination of economical operation, long service life, at the highest quality and throughput.

Advantages

- Short change-over time
- Easy handling
- High machine availability
- Favourable alternative compared with a spare cutter

SGS 200-L / SGS 300-L / SGS 400-L

Strandpelletizers Series SGS

Compact Design

The SGS series Strand Pelletizer has a very effective Sound Damping System that is included as standard equipment. With the Cutting chamber isolated from all other components noise levels from 75 to 85 dBA are guaranteed depending on the product and type of operation.

The Rotor is a replaceable segment, milling type helical design. Rotors are available in a variety of materials. Tool steels, stellite tipped, and contamination-free, carbide tipped specific designs are dependent on the cutting application.

The Strand infeed assembly consists of the infeed table and upper and lower feed rolls. They are designed to ensure positive strand control. The serrated lower feed roll is driven via a change gear from the main rotor drive. The upper feed roll is a stainless core with elastic covering. The design and the feed roll orientation provide for excellent pulling force on the strands without having to drive the upper feed roll. And the elastic covering is forgiving enough to accommodate any discrepancy in strand diameter reducing the problem of dropped strands.

Strandpelletizers Series SGS

Maintenance Service without any Problems

Because the rigors of product change over are involved enough, you don't need another labor intensive piece of equipment taking up your valuable time.

The unique and patented swing away lower feed roll design enables you to reduce down time between product changes and it's easy with no tools required.
